

ADVANCED DIAGNOSTIC MEDICAL IMAGING CENTER

DEPARTMENT OF RADIOLOGY & PACS ARCHIVE | ACCREDITED FACILITY

PATIENT NAME: MR. MOHAMMED AL-BALUSHI

PATIENT ID: MED-344770

DOB / AGE: 14-Aug-1964

GENDER: MALE

STUDY: MRI RIGHT KNEE JOINT (NON-CONTRAST)

STUDY DATE: 28-SEP-2026

MODALITY: MRI / 3.0T MAGNETOM (DICOM 3.0 Standard)

STATUS: VERIFIED & FINALIZED

R

POST

MARKED JOINT SPACE NARROWING (1.4 mm)

KELLGREN-LAWRENCE GRADE 3-4

MARGINAL OSTEOPHYTES (LATERAL)

FOV: 24cm | MATRIX: 512x512 | THICKNESS: 3.0mm

OFFICIAL RADIOLOGIST FINDINGS & IMPRESSION:

- Severe medial tibiofemoral joint space narrowing with complete articular cartilage denudation.
- Extensive subchondral bone sclerosis and cystic changes in medial tibial plateau.
- Grade 3 complex tear of posterior horn of medial meniscus; anterior cruciate ligament attenuated.
- Prominent marginal osteophytes along medial and lateral femoral condyles (Kellgren-Lawrence Grade 4).

IMPRESSION: Advanced end-stage right knee osteoarthritis. Candidate for total knee replacement.
