DEPARTMENT OF RADIOLOGY & PACS ARCHIVE | ACCREDITED FACILITY

PATIENT NAME: MASTER RASHID AL-THANI (FATHER: MR. JASSIM)

PATIENT ID: MED-589758

DOB / AGE: 10-Jan-2022

GENDER: MALE

STUDY: PEDIATRIC BILATERAL FEET WEIGHT-BEARING AP/LATERAL

STUDY DATE: 30-SEP-2026

MODALITY: DIGITAL RADIOGRAPHY (DR) (DICOM 3.0 Standard)

STATUS: VERIFIED & FINALIZED

R

POST

TALOCALCANEAL ANGLE: 12 DEG (VARUS)

EQUINOVARUS DEFORMITY NOTED

FOV: 24cm | MATRIX: 512x512 | THICKNESS: 3.0mm

OFFICIAL RADIOLOGIST FINDINGS & IMPRESSION:

- Reduced talocalcaneal angle (12 degrees, normal range 25-40), indicative of hindfoot varus.
- Parallel relationship between talus and calcaneus axes on lateral view (equinus positioning).
- Forefoot adduction and mild navicular medial subluxation relative to talar head.
- No evidence of bone synostosis or tarsal coalition.

IMPRESSION: Bilateral residual talipes equinovarus deformities. Recommended for pediatric orthopedic correction.
